Gavin Fay

Additional runs

- 'no RecCPA' - removes recreational CPA indices from the objective function

Comparison of estimated time series of (a) spawning output, (b) recruitment, and (c) Fishing mortality rate, for the SS sensitivity runs, including a run that does not fit to the recreational CPA indices (“no RecCPA” denoted in red)

Additional analyses

- “No RecCPA”
 - Improved fit to discards, poorer fit to length comps
 - Slightly higher terminal year stock size compared to the base-case run
